

The Office of the National Coordinator for
Health Information Technology

Plenary Session: The National eHealth Agenda

**2013 Kentucky eHealth Summit
September 17, 2013**

Judy Murphy, RN, FACMI, FHIMSS, FAAN

Deputy National Coordinator for Programs & Policy
Office of the National Coordinator for Health IT
Department of Health & Human Services
Washington DC

Putting the **I** in Health **IT** 
www.HealthIT.gov

A look at . . .

- Yesterday - what we've gotten done
 - The status of the EHR Incentive Program
 - How is Kentucky is doing
- Today - what are our key priorities
 - Health information exchange
 - Patient engagement
- Tomorrow – what are the biggest challenges in our future
 - Meaningful use of meaningful use
 - Health reform

YESTERDAY - A Remarkable Journey ...

ONC Meaningful Use State Challenge Measures Report

<http://dashboard.healthit.gov/data>

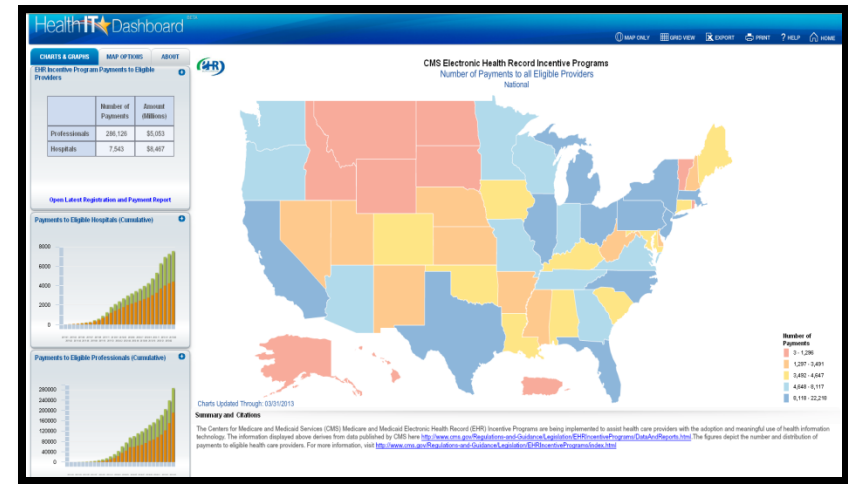

The screenshot shows the Health IT Dashboard website. The top navigation bar includes 'HealthIT.gov', 'Health IT Buzz Blog', 'Get Email Updates', and 'Contact'. The main header features the 'HealthIT Dashboard' logo with the tagline 'Advancing America's Health Care'. A left sidebar contains links: 'ONC Home', 'Dashboard FAQ', 'Dashboard Datasets', and 'Health IT Quick-Stats'. The main content area is titled 'Datasets & Documentation' and contains a paragraph about the dashboard's purpose. Below this is a table titled 'ONC Meaningful Use State Challenge Measures Report'. The table has two rows of data. The first row describes measures following CMS criteria for incentive payments, with dates 02/2013 and 02/2013, and a link to a 'Spreadsheet [Alt-F21]'. The second row describes an analysis of change from July 2012 to January 2013, with dates 02/2013 and 06/2012 - 02/2013, and links to a 'Spreadsheet [Alt-F22]', a 'Color Coded PDF [Alt-F23]', and a 'Black/White PDF [Alt-F24]'. A red rectangular box highlights the right side of the table, encompassing the links for both rows.

% Queries from Acute Care Hospitals	0	99%	99%	99%	99%

Focus on INTEROPERABILITY in the Stage 2 Meaningful Use Criteria

- E-prescribing (ambulatory and inpatient discharge)
- Transition of Care summary exchange:
 - Create & transmit from EHR
 - Receive & incorporate into EHR
- Lab tests & results from inpatient to ambulatory
- Public health reporting – transmission to:
 - Immunization Registries
 - Public Health Agencies for syndromic surveillance
 - Public health Agencies for reportable lab results
 - Cancer Registries
- Patient ability to View, Download and Transmit their health data to a 3rd Party
- Create an export summary of patient data, in order to enable data portability

Interoperability Basics

Take the interactive training course for healthcare providers to learn how to meet the Stage 2 Meaningful Use data exchange requirements.

ABOUT HealthIT.gov

Health information technology (health IT) makes it possible for health care providers to better manage patient care through secure use and sharing of health information. Health IT includes the use of electronic health records (EHRs) instead of paper medical records to maintain people's health information.

Interoperability Basics Training Course

Interactive course using stories, analogies, and practical examples to highlight new vocabulary, content, transport, and services standards introduced in the Meaningful Use Stage 2. This course also introduces the concept of interoperability building blocks and utilizes stories to show concepts in practice.

The course is approximately 75 minutes in length; however, since the course is designed to consist of several short lessons/topics, the learner has the flexibility to take the entire course all at once or over a period of time.

The four topics within this course are:

- Defining Interoperability
- Interoperability Path to Meaningful Use Stage 2
- Building Blocks of Interoperability
- The Effect of Interoperability on Categories of Care

Four other Interoperability Modules

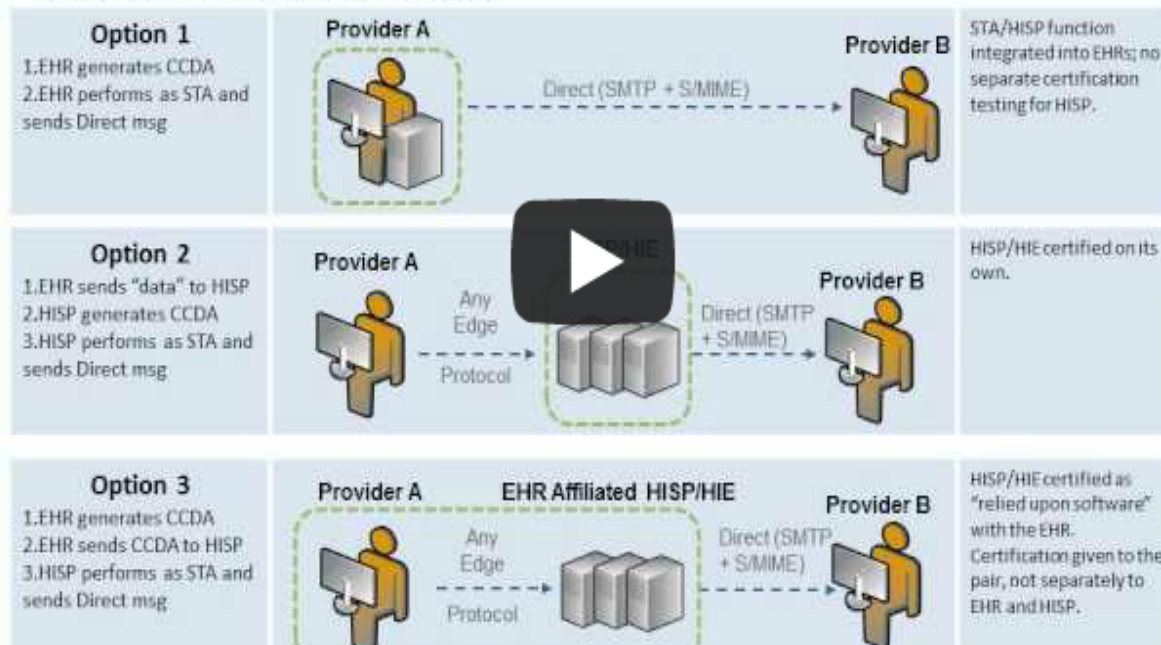

Four additional modules that cover the Meaningful Use Stage 2 interoperability data exchange criteria have been released:

1. Transitions of care between care providers and care venues
2. Lab interoperability between hospitals and ambulatory providers
3. View, download, and transmit of information between patients and providers
4. Transmission of information to public health agencies

Health IT Videos

Meaningful Use Education Module: Transitions of ...

- (i) Create CCDA with requisite data specified for transition of care
- (ii) Enable a user to electronically transmit ToC in accordance with "Direct" (or "Direct" + XDR/XDM, or SOAP + XDR/XDM)

Meaningful Use Education Module: Transitions of Care

Feb 19, 2013 | 16:03

This meaningful use education module covers "transitions of care" from both a meaningful use and EHR technology certification perspective. It walks you through the requirements for the meaningful use "transitions of care" objective and measures as well as their relationship to EHR technology certification.

Patient Engagement Back in the Day...

“The obedience of a patient to the prescriptions of his physician should be prompt and implicit. [The patient] should never permit his own crude opinions as to their fitness to influence his attention to them.”

- AMA's Code of Medical Ethics (1847)

And Now...

“Patients share the responsibility for their own health care....”

- AMA's Code of Medical Ethics (current)

“I believe that access to your medical record can save your life.”

-Regina Holliday

“I'M ADVOCATING COORDINATED CARE.”

Nikolai “Kolya” Kirienko

Crohn's Disease Patient / Health IT Advocate

“Patients can help. We can be a second set of eyes on our medical records. I corrected the mistakes in my health record, but many patients don't understand how important it will be to have correct medical information, until the crisis hits. Better to clean it up now, not when there's time pressure.”

— Dave deBronkart (ePatient Dave)

“I Approach Diabetes Management the Way I Manage Life... with My Family.”

- Donald Jones

Why Should You Use Health IT to Engage Your Patients?

- Patient as Partner
- Engaged patients demonstrate better health outcomes
- Patients increasingly expect engagement via IT, as in many other aspects of their lives
- Meaningful Use criteria

66% of Americans say they would consider switching to a physician who offers access to medical records through a secure Internet connection

– according to a 2011 Deloitte Survey

THE BLOCKBUSTER DRUG OF THE CENTURY: AN ENGAGED PATIENT

Tweet 165 Share 63 +1 12 Like 26

August 28th, 2012 by **Leonard Kish**

Print Friendly

Patient engagement continues to be big news. [Meaningful Use's Stage 2 final rule](#) has patient and family engagement at its very core. And, based on solicited feedback, the ONC reduced patient engagement measures from 10% to 5%, showing it may be the hardest goal of Meaningful Use to achieve.

So why, oh why, is patient engagement such a big part of MU and the Medicare shared-savings program for ACOs?

All this is so different for healthcare providers. It's like a great restaurant learning that their new business is going to be – in addition to continuing to provide a great in-restaurant experience – teaching people how to cook at home. What? This isn't what we do! It's impossible!

Actually, it's surprising that it has taken us this long to focus on patient engagement because the results we have thus far are nothing short of astounding. If patient engagement were a drug, it would be the blockbuster drug of the century and malpractice not to use it.

Top 10 Tech Trends: Pushing the Patient into the Picture

February 22, 2013 by Gabriel Perna

In 2012, Leonard Kish, a health IT strategist, made a [bold proclamation](#) about a new “blockbuster drug of the century.” The drug Kish was referring to can’t be found in stores or in a scientific laboratory. Instead, he said, it was something conceptual, adding that if healthcare organizations of all kinds made use of that “drug,” the results would be astounding.

Kish was talking about patient engagement; and his thoughts echo a rising sentiment among healthcare organizations as well as the federal government. While patient engagement is certainly not a novel idea, thanks to the Office of the National Coordinator for Health IT’s (ONC) Blue Button initiative, it’s been recently thrust into the limelight.

ONC, other government agencies, and other healthcare stakeholders have used the Blue Button capability to promote the idea of giving patients easy access to their health information. They’re coupling this push with various data liberation initiatives, which would allow for patient data to be used by developers to create

Focus on Consumer ACCESS in the Stage 2 Meaningful Use Criteria

- Reminders for preventive/follow-up care provided
- Educational resources identified and provided
- Online access to personal health information (portal, PHR)
- Visit Summaries provided
- Patients can send secure messages to their provider
- Patients can View, Download and Transmit to 3rd Party

ACCESS: Consumer Blue Button Pledge Program (www.healthit.gov/pledge)

Over 450 organizations have Pledged to provide access to personal health information for 1/3 of Americans...

Putting the **I** in Health**IT**
www.HealthIT.gov

Blue Button Pledge
To Empower Individuals to Be Partners in Their Health Through Health IT

Who is Pledging IT?
Numerous stakeholders – such as payers, providers, consumer advocacy groups, health-related associations, and non-profits – that play a critical role in managing and improving the quality of health and health care are taking the health information technology (health IT) pledge. An important part of health IT is giving people the information and tools they need to be partners in their health. The entities listed below are those who have taken the pledge.

Take the Pledge

Enim dignissim augue et enim ut cursus hac in augue ultrices duis aenean dignissim parturient, integer tincidunt dignissim parturient. Nisi proin, urna pellentesque adipiscing porttitor parturient turpis arcu.

About

ONC is the principal Federal entity charged with coordination of nationwide efforts to implement and use the most advanced health information technology and the electronic exchange of health information. The position of National Coordinator was created in 2004, through an Executive Order, and legislatively mandated in the Health Information Technology for

As a Health Care Provider

- **TREAT** high blood pressure and cholesterol in your patients.
- **TREAT** appropriate patients with Aspirin.
- **ESTABLISH** and **DISCUSS** with patients their specific goals for treatment and the most effective ways that they can help control their risk factors for heart disease and stroke.
- **COACH** your patients to develop heart-healthy habits, such as regular exercise and a diet rich in fresh fruits and vegetables, and stress reduction techniques. Provide tools to show their progress and access to team members to help them succeed.
- **ASK** your patients about their smoking status and provide cessation support and medication when appropriate.
- **ASK** about barriers to medication adherence and help find solutions.
- **USE** health information technology, such as electronic health records and decision support tools, to improve the delivery of care and control of the **ABCS**.

ONC/Million Hearts/American Heart Association Beat Down Blood Pressure Video Challenge

One in three adults in the United States has high blood pressure (a.k.a., “hypertension”) – Do You? Many people who have high blood pressure don’t know it, which is why it’s often referred to as the “silent killer.” High blood pressure damages the brain, heart, eyes, and kidneys while causing no symptoms. Fortunately, there are steps that each of us can take to prevent or manage high blood pressure, and technology can help!

Beat Down Blood Pressure Video Contest

To raise awareness about this silent killer and crowd source inspirational stories about how people are using consumer e-health tools and other health IT to partner with their physician to manage this disease, the Office of the National Coordinator for Health Information Technology (ONC) in partnership with Million Hearts, an HHS initiative to prevent a million heart attacks and strokes in five years, and the American Heart Association announce the [Beat Down Blood Pressure Video Challenge](#) (#HealthIT4UBP).

This is the second in a series of 2012 health IT video contests through which members of the public are incentivized to create a short, but impactful video sharing how they use health IT or consumer e-health tools to manage high blood pressure. This contest features cash prizes for the best patient/consumer stories that demonstrate use of consumer e-health tools to:

- Routinely monitor blood pressure,
- Take medication as prescribed, and/or
- Make lifestyle changes that reduce risks and enhance heart health.

"I am the future of health care."

Putting the **I** in HealthIT

Thank you!
